THE BUR OAK

Large size, long-lived, & a dominant landscape feature at maturity, not appropriate for small yards

Tolerant of soil conditions that adversely affect some common species of Oak, notably high soil pH

Beautiful, majestic habit when mature

Less susceptible to Oak Wilt, a disease of growing concern in Central Ohio

Large fruit (acorns) that may not be preferred near driveways or over a home

Does not transplant as well, so it's sometimes hard to find at nurseries and garden centers
